

Amendments to the Claims:

None.

Listing of Claims:

1-20. (canceled)

21. (previously presented): An ocular apparatus for medically treating an eye, the ocular apparatus being capable of cooperating with soft tissue proximate the eye, the ocular apparatus comprising:

- a medicament containment member;

- a handle operably connected to the medicament containment member, the handle including a lateral straddling member and a medial straddling member, the lateral straddling member including a first end and a second end, the medial straddling member including a first end and a second end, the first end of the lateral straddling member connected to the medicament containment member and the first end of the medial straddling member connected to the medicament containment member, wherein placement of the medicament containment member directly on the eye is maintained by the operable cooperation of the handle and soft tissue proximate the eye;

- a first grip portion attached to the second end of the lateral straddling member;

- a second grip portion attached to the second end of the medial straddling member wherein the first and second grip portions facilitate grasping of the handle; and,

- a current distribution member in electrical communication with the medicament containment member.

22. (previously presented): The ocular apparatus of claim 21 wherein maintaining placement of the medicament containment member directly on the eye is facilitated by the abutment of lateral straddling member proximate lateral soft tissue of the eye and the medial straddling member proximate medial soft tissue of the eye.

23. (canceled)

24. (previously presented): The ocular apparatus of claim 22 wherein the medial and lateral straddling members each include a width such that opening and closing of the eye is substantially unobstructed.

25. (previously presented): The ocular apparatus of claim 21 wherein at least one of the lateral or medial straddling members includes a width to retain an eyelid in an open position.

26. (previously presented): The ocular apparatus of claim 21 further comprising:
a means for biasing the abutment of the handle with soft tissue proximate the eye.

27-28. (canceled)

29. (previously presented): The ocular apparatus of claim 26 wherein the means for biasing simultaneously maintains the abutment of the lateral straddling member with lateral soft tissue proximate the eye and the abutment of the medial straddling member with medial soft tissue proximate the eye.

30. (canceled)

31. (previously presented): The ocular apparatus of claim 21 wherein the handle includes a wire.

32. (previously presented): The ocular apparatus of claim 21 wherein the handle is unitarily configured with the medicament containment member and extending there from.

33. (canceled)

34. (previously presented): An ocular apparatus for medically treating an eye, the ocular apparatus being capable of cooperating with soft tissue proximate the eye, the ocular apparatus comprising:

a medicament containment member;
a handle is affixed to the medicament containment member;
a registration member attached to the medicament containment member and extending outwardly there from, wherein placement of the medicament containment member directly on the eye is maintained by operable cooperation of the registration member and soft tissue proximate the eye;
a means for biasing the abutment of the registration member with the soft tissue proximate the eye; and,
a current distribution member in electrical communication with the medicament containment member.

35. (previously presented): The ocular apparatus of claim 34 wherein maintaining the placement of the medicament containment member directly on the eye is facilitated by the abutment of the registration member proximate soft tissue of the eye.

36. (previously presented): The ocular apparatus of claim 34 wherein the registration member includes a width such that opening and closing of the eye is substantially unobstructed

37. (previously presented): The ocular apparatus of claim 34 wherein the registration member includes a width to retain an eyelid in an open position.

38. (canceled):

39. (previously presented): The ocular apparatus of claim 34 wherein the registration member further comprising:

a lateral member including a first end and a second end, the first end of the lateral member being affixed to the medicament containment member and extending outwardly there from; and,

a medial member including a first end and a second end, the first end of the medial member being affixed to the medicament containment member and extending outwardly there from.

40. (canceled)

41. (previously presented): The ocular apparatus of claim 34 wherein the means for biasing simultaneously maintains the abutment of the lateral member with lateral soft tissue proximate the eye and the abutment of the medial member with medial soft tissue proximate the eye.

42. (previously presented): The ocular apparatus of claim 39 wherein at least one of the lateral and medial members of the registration member includes a width such that opening and closing of the eye is substantially unobstructed.

43. (previously presented): The ocular apparatus of claim 39 wherein at least one of the lateral and medial members of the registration member includes a width to retain an eyelid in an open position.

44. (previously presented): The ocular apparatus of claim 34 the handle member further comprising:

- a first member including a first end and a second end, the first end of the first member being affixed to the medicament containment member; and,

- a second member including a first end and a second end, and the first end of the second member being affixed to the medicament containment member.

45. (previously presented): The ocular apparatus of claim 44 further comprising:

- a first grip portion attached to the second end of the first member of the handle; and,

- a second grip portion attached to the second end of the second member of the handle, wherein the first and second grip portions facilitate grasping of the handle.

46. (previously presented): The ocular apparatus of claim 34 wherein the handle includes a wire.

47. (previously presented): The ocular apparatus of claim 34 wherein the registration member

includes a wire.

48. (currently amended): The ocular apparatus of claim 34 wherein the handle is unitarily configured with the medicament containment member and extends therefrom.

49. (previously presented): The ocular apparatus of claim 34 wherein the registration member is unitarily configured with the medicament containment member and extends therefrom.

50. (previously presented): The ocular apparatus of claim 34 wherein the handle is connected to the registration member.

51. (canceled)

52. (previously presented): An ocular apparatus for medically treating an eye, the ocular apparatus being capable of cooperating with soft tissue proximate the eye, the ocular apparatus comprising:

- a medicament containment member;

- a handle operably connected to the medicament containment member, the handle including a lateral straddling member and a medial straddling member, the lateral straddling member including a first end and a second end, the medial straddling member including a first end and a second end, the first end of the lateral straddling member connected to the medicament containment member and the first end of the medial straddling member connected to the medicament containment member, wherein placement of the medicament containment member directly on the eye is maintained by the operable cooperation of the handle and soft tissue proximate the eye;

- a means for biasing the abutment of the handle with soft tissue proximate the eye ; and,

- a current distribution member in electrical communication with the medicament containment member.

53. (previously presented): The ocular apparatus of claim 52 wherein maintaining placement of the medicament containment member directly on the eye is facilitated by the abutment of

lateral straddling member proximate lateral soft tissue of the eye and the abutment of the medial straddling member proximate medial soft tissue of the eye.

54. (previously presented): The ocular apparatus of claim 52 further comprising:
a first grip portion attached to the second end of the lateral straddling member; and,
a second grip portion attached to the second end of the medial straddling member
wherein the first and second grip portions facilitate grasping of the handle.

55. (previously presented): The ocular apparatus of claim 53 wherein the medial and lateral straddling members each include a width such that opening and closing of the eye is substantially unobstructed.

56. (previously presented): The ocular apparatus of claim 52 wherein at least one of the lateral or medial straddling members includes a width to retain an eyelid in an open position.

57. (previously presented): The ocular apparatus of claim 52 wherein the means for biasing simultaneously maintains the abutment of the lateral straddling member with lateral soft tissue proximate the eye and the abutment of the medial straddling member with medial soft tissue proximate the eye.

58. (previously presented): The ocular apparatus of claim 52 wherein the handle includes a wire.

59. (previously presented): The ocular apparatus of claim 52 wherein the handle is unitarily configured with the medicament containment member and extends therefrom.
